

Anti-Oct4 Antibody [SD0750]

ET1612-20

Product Type:	Recombinant Rabbit monoclonal IgG, primary antibodies
Species reactivity:	Human, Mouse
Applications:	WB, IF-Cell, IF-Tissue, IHC-P, IP, FC, ChIP
Molecular Wt:	Predicted band size: 39 kDa
Clone number:	SD0750

Description: POU5F1 (POU domain, class 5, transcription factor 1), also known as octamer-binding transcription factor-3 (Oct-3, OTF3), octamer-binding transcription factor-4 (Oct-4, Otf-4) and Oct-3/4, modulates embryonic stem (ES) cell populations by influencing lineage commitment. Oct-3/4 sustains stem-cell self-renewal and differentiation pathways. Transcription factors containing the POU homeodomain regulate tissue-specific gene expression in lymphoid and pituitary differentiation and in early mammalian development. Oct-3/4 is capable of inducing rapid proliferation and tumorigenic properties of ES cells through activation of the UTF1 gene. In humans, two Oct-3/4 isoforms contribute to influencing the undifferentiated phenotype of ES cells. Oct-3/4 pseudogenes localizing to human chromosomes 10 and 8 are reported to be transcribed in certain cancer cell lines and tissues.

Immunogen: Synthetic peptide within human Oct4 aa 20-60.

Positive control: F9 cell lysate, NCCIT cell lysate, NCCIT, F9, mouse liver tissue, human seminoma tissue tissue.

Subcellular location: Cytoplasm, Nucleus.

Database links: SwissProt: Q01860 Human | P20263 Mouse

Recommended Dilutions:

WB	1:2,000-1:8,000
IF-Cell	1:1,000-1:2,000
IF-Tissue	1:2,000
IHC-P	1:500-1:4,000
IP	Use at an assay dependent concentration.
FC	1ug/mL
ChIP	Use 0.5~2 µg for 25 µg of chromatin.

Storage Buffer: 1*TBS (pH7.4), 0.05% BSA, 40% Glycerol. Preservative: 0.05% Sodium Azide.

Storage Instruction: Shipped at 4°C. Store at +4°C short term (1-2 weeks). It is recommended to aliquot into single-use upon delivery. Store at -20°C long term.

Purity: Protein A affinity purified.

Images

Fig1: Immunocytochemistry analysis of NCCIT cells labeling Oct4 with Rabbit anti-Oct4 antibody (ET1612-20) at 1/2,000 dilution.

Cells were fixed in 4% paraformaldehyde for 20 minutes at room temperature, permeabilized with 0.1% Triton X-100 in PBS for 5 minutes at room temperature, then blocked with 1% BSA in 10% negative goat serum for 1 hour at room temperature. Cells were then incubated with Rabbit anti-Oct4 antibody (ET1612-20) at 1/2,000 dilution in 1% BSA in PBST overnight at 4 °C. Goat Anti-Rabbit IgG H&L (iFluor™ 488, HA1121) was used as the secondary antibody at 1/1,000 dilution. PBS instead of the primary antibody was used as the secondary antibody only control. Nuclear DNA was labelled in blue with DAPI.

Beta tubulin (M1305-2, red) was stained at 1/100 dilution overnight at +4°C. Goat Anti-Mouse IgG H&L (iFluor™ 594, HA1126) was used as the secondary antibody at 1/1,000 dilution.

Fig2: Immunocytochemistry analysis of F9 cells labeling Oct4 with Rabbit anti-Oct4 antibody (ET1612-20) at 1/2,000 dilution.

Cells were fixed in 4% paraformaldehyde for 15 minutes at room temperature, permeabilized with 0.1% Triton X-100 in PBS for 15 minutes at room temperature, then blocked with 1% BSA in 10% negative goat serum for 1 hour at room temperature. Cells were then incubated with Rabbit anti-Oct4 antibody (ET1612-20) at 1/2,000 dilution in 1% BSA in PBST overnight at 4 °C. Goat Anti-Rabbit IgG H&L (iFluor™ 488, HA1121) was used as the secondary antibody at 1/1,000 dilution. PBS instead of the primary antibody was used as the secondary antibody only control. Nuclear DNA was labelled in blue with DAPI.

Beta tubulin (HA601187, red) was stained at 1/100 dilution overnight at +4°C. Goat Anti-Mouse IgG H&L (iFluor™ 594, HA1126) was used as the secondary antibody at 1/1,000 dilution.

Fig3: Western blot analysis of Oct4 with anti-Oct4 antibody (ET1612-20) at 1/2,000 dilution.

Lane 1: Wild-type NCCIT whole cell lysate.

Lane 2: Oct4 knockout NCCIT whole cell lysate.

Proteins were transferred to a PVDF membrane and blocked with 5% NFDM in TBST for 1 hour at room temperature. The primary Anti-Oct4 antibody (ET1612-20, 1/2,000) and Anti-HSP90 antibody (ET1605-56, 1/10,000) were used in 5% BSA at room temperature for 2 hours. Goat Anti-Rabbit IgG H&L (HRP) Secondary Antibody (HA1001) at 1/50,000 dilution was used for 1 hour at room temperature.

Fig4: Western blot analysis of Oct4 on different lysates with Rabbit anti-Oct4 antibody (ET1612-20) at 1/2,000 dilution.

Lane 1: F9 cell lysate

Lane 2: NCCIT cell lysate

Lysates/proteins at 20 µg/Lane.

Predicted band size: 39 kDa

Observed band size: 45 kDa

Exposure time: 1 minute 59 seconds;

4-20% SDS-PAGE gel.

Proteins were transferred to a PVDF membrane and blocked with 5% NFDM/TBST for 1 hour at room temperature. The primary antibody (ET1612-20) at 1/2,000 dilution was used in 5% NFDM/TBST at 4°C overnight. Goat Anti-Rabbit IgG - HRP Secondary Antibody (HA1001) at 1/50,000 dilution was used for 1 hour at room temperature.

Fig5: Immunohistochemical analysis of paraffin-embedded human seminoma tissue with Rabbit anti-Oct4 antibody (ET1612-20) at 1/4,000 dilution.

The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0) for 2 minutes. The tissues were blocked in 1% BSA for 20 minutes at room temperature, washed with ddH₂O and PBS, and then probed with the primary antibody (ET1612-20) at 1/4,000 dilution for 1 hour at room temperature. The detection was performed using an HRP conjugated compact polymer system. DAB was used as the chromogen. Tissues were counterstained with hematoxylin and mounted with DPX.

Fig6: Oct4 was immunoprecipitated in 0.2mg NCCIT cell lysate with ET1612-20 at 2 µg/25 µl agarose. Western blot was performed from the immunoprecipitate using ET1612-20 at 1/2,000 dilution. Anti-Rabbit IgG for IP Nano-secondary antibody (NBI01H) at 1/5,000 dilution was used for 1 hour at room temperature.

Lane 1: NCCIT cell lysate (input)

Lane 2: ET1612-20 IP in NCCIT cell lysate

Lane 3: Rabbit IgG instead of ET1612-20 in NCCIT cell lysate

Blocking/Dilution buffer: 5% NFDM/TBST

Exposure time: 1 minute 40 seconds

Fig7: Flow cytometric analysis of NCCIT cells labeling Oct4.

Cells were fixed and permeabilized. Then stained with the primary antibody (ET1612-20, 1µg/ml) (red) compared with Rabbit IgG Isotype Control (green). After incubation of the primary antibody at +4°C for an hour, the cells were stained with a iFluor™ 488 conjugate-Goat anti-Rabbit IgG Secondary antibody (HA1121) at 1/1,000 dilution for 30 minutes at +4°C. Unlabelled sample was used as a control (cells without incubation with primary antibody; black).

Fig8: Chromatin immunoprecipitations were performed with cross-linked chromatin from NCCIT cells with Oct4 (ET1612-20) or Normal Rabbit IgG according to the ChIP protocol. The enriched DNA was quantified by real-time PCR using indicated primers. The amount of immunoprecipitated DNA in each sample is represented as signal relative to the total amount of input chromatin, which is equivalent to one.
