APC Conjugated Anti-Mouse CD8 alpha Recombinant Antibody [PSH05-00] - Rabbit IgG (Chimeric)

HA720207F

Product Type: Recombinant Chimeric Antibody IgG, primary antibodies

Species reactivity: Mouse **Applications:** FC

Molecular Wt: Predicted band size: 27 kDa

Clone number: PSH05-00

Description: The CD8 antigen is a cell surface glycoprotein found on most cytotoxic T lymphocytes that

mediates efficient cell-cell interactions within the immune system. The CD8 antigen, acting as a coreceptor, and the T-cell receptor on the T lymphocyte recognize antigen displayed by an antigen-presenting cell (APC) in the context of class I MHC molecules. The functional coreceptor is either a homodimer composed of two alpha chains, or a heterodimer composed of one alpha and one beta chain. Both alpha and beta chains share significant homology to immunoglobulin variable light chains. This gene encodes the CD8 alpha chain isoforms. Two alternative transcripts encoding distinct isoforms, one membrane associated and one

secreted, have been identified.

Conjugate: APC

Immunogen: Recombinant protein.

Positive control: BABL/C mouse splenocytes.

Subcellular location: Cell membrane.

Database links: SwissProt: P01731 Mouse

Recommended Dilutions:

FC 5 μl per million cells in 100 μl staining volume or 5 μl per 100 μl of whole blood.

Storage Buffer: Supplied in phosphate-buffered solution, pH 7.2, containing 0.2% ProClean 950 and BSA.

Storage Instruction: Store at 2° to 8° . Avoid repeated freeze / thaw cycles.

Purity: Protein A affinity purified.

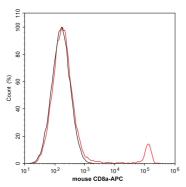

Fig1: Flow cytometric analysis of BABL/C mouse splenocytes labeling Mouse CD8 alpha.

Cells were washed twice with cold PBS and resuspend. Then stained with the primary antibody (HA720207F, $1\mu g/mL$) (red). Unlabelled sample was used as a control (cells without incubation with primary antibody; black).

Note: All products are "FOR RESEARCH USE ONLY AND ARE NOT INTENDED FOR DIAGNOSTIC OR THERAPEUTIC USE".
